

Fife: Coastal Management

April '24 to March '25

£39,000

Fife Council

Overview:

Our project aims to update understanding of projected coastal impacts in three case study areas: West Wemyss to East Wemyss, Kirkcaldy Links town area, Burntisland to Pettycur Bay. The outputs will inform creation of Council approaches to how we communicate the challenges with communities, and inform Council responses and policies on coastal impacts.

What we are hoping to learn:

We will learn about coastal values, liabilities, and engagement around coastal impacts. We will learn with and from communities of interest and learn how the council can respond to future coastal impacts.
